

AET Products and Services Overview

*"From concept through completion, AET's goal is simple:
To design, fabricate and install a safe product that produces the desired
effect with durability, serviceability and simplicity of operation."*

New Attraction Design, Fabrication & Installation

AET has been working with the major Theme Parks, Resorts and Theatrical Venues on new attractions and projects since the company was founded in 1990. Our contracts with these companies preclude specific disclosure of most of what we do. From simple atmospheric effects to complex, one of a kind, automated show action equipment, AET has provided design, fabrication and installation solutions for our clients. AET has provided these services for attractions in the U. S., Europe, and Asia. (Our services have even been utilized to provide an increased level of realism and safety for a United States Navy battlestations simulator.) The photos on the following pages provide a small sample of the themed products we provide.

Attraction Improvement & Service

AET has been a primary vendor for themed attraction operators, providing modification, repair and service on existing ride systems, ride vehicles and show action equipment.
