

200 GALLON BULK STORAGE TANK PROP

Description:

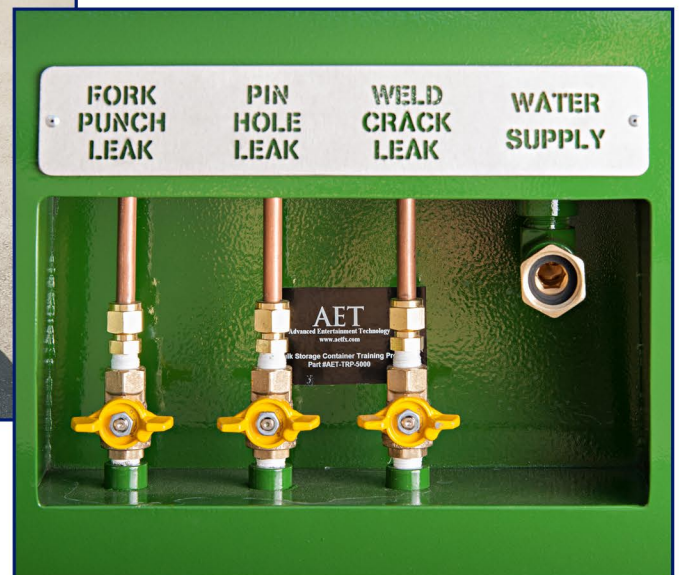

This prop is used for training in the application of tank bandages. Three leak modes are simulated; (1) a fork lift punch at the base of the tank, (2) a pin hole leak, and (3) a weld crack leak. The rear of the tank is open to make the water connection and access valves controlling the three training scenarios. A removable cover on the back of the tank provides access to the internal plumbing.

This prop requires a user provided hose and source for water. A standard household water hose connection is provided.

This prop meets California Title 19, Section 2560-G Field Training Facility requirements.

Bulk Storage Tank Hazmat Training Prop

Training Operation Modes:

- Liquid leak from fork lift punched hole near bottom of tank.
- Liquid leak from crack in weld seam.
- Liquid leak from pin hole in tank.
